

Secure project success

Warm up a project team and bring out the best in each participant. Prepare your people to anticipate and navigate the heat of project pitfalls.

In Celemi Cayenne™, participants advise a recently finished project—an IT roll-out of a new system. The catch? Nobody's satisfied. The project failed to deliver as expected, the potential value was insufficiently tapped and there were overruns.

In teams, participants revisit the project to identify the issues, deliver better results and maximize business value while balancing diverse stakeholder needs. The challenges are universal. The lessons are as memorable like the burn of a hot pepper.

Help your company learn from their mistakes long before the stakes are high by playing Celemi Cayenne™ – the secret ingredient for securing project success.

KEY THEMES

- Business value
- Teamwork
- Decision-making
- Project Success
- Communication

TARGET GROUP

All project participants, including project managers, business executives, content provider consultants, experts, end users, and support personnel.

NUMBER OF PARTICIPANTS

12-30, divided into 4-6. Multiplace games can be run simultaneously.

MATERIALS

Board-based business simulation.

TIME

6 – 8 hours.

What clients say

"I found it stimulating and thought-provoking, especially the 'knock-on' effect of our choices noted, making decisions and the importance of group-work and communication."

-Team leader, Local county council, United Kingdom

Celemi Cayenne™ is designed for you who wants to increase staff commitment and improve alignment on a project. Participants will secure an understanding of critical success factors in project work and, by competing in teams, establish proactive behavior and effective communication amongst project team members.

Key employee results

Through the fiery competition of Celemi Cayenne™, participants will:

- gain a holistic understanding of projects and critical success factors.
- diagnose signs and symptoms of potential problems and mitigate them.
- prioritize to get the most value from limited resources.
- assess the conditions for successful project management.
- identify and utilize key performance measures.
- understand the importance of preparedness and actions from the start.
- recognize the art of balancing needs to create maximum business value.
- build a common vocabulary and understanding.
